

## WALL MEASURING GUIDE

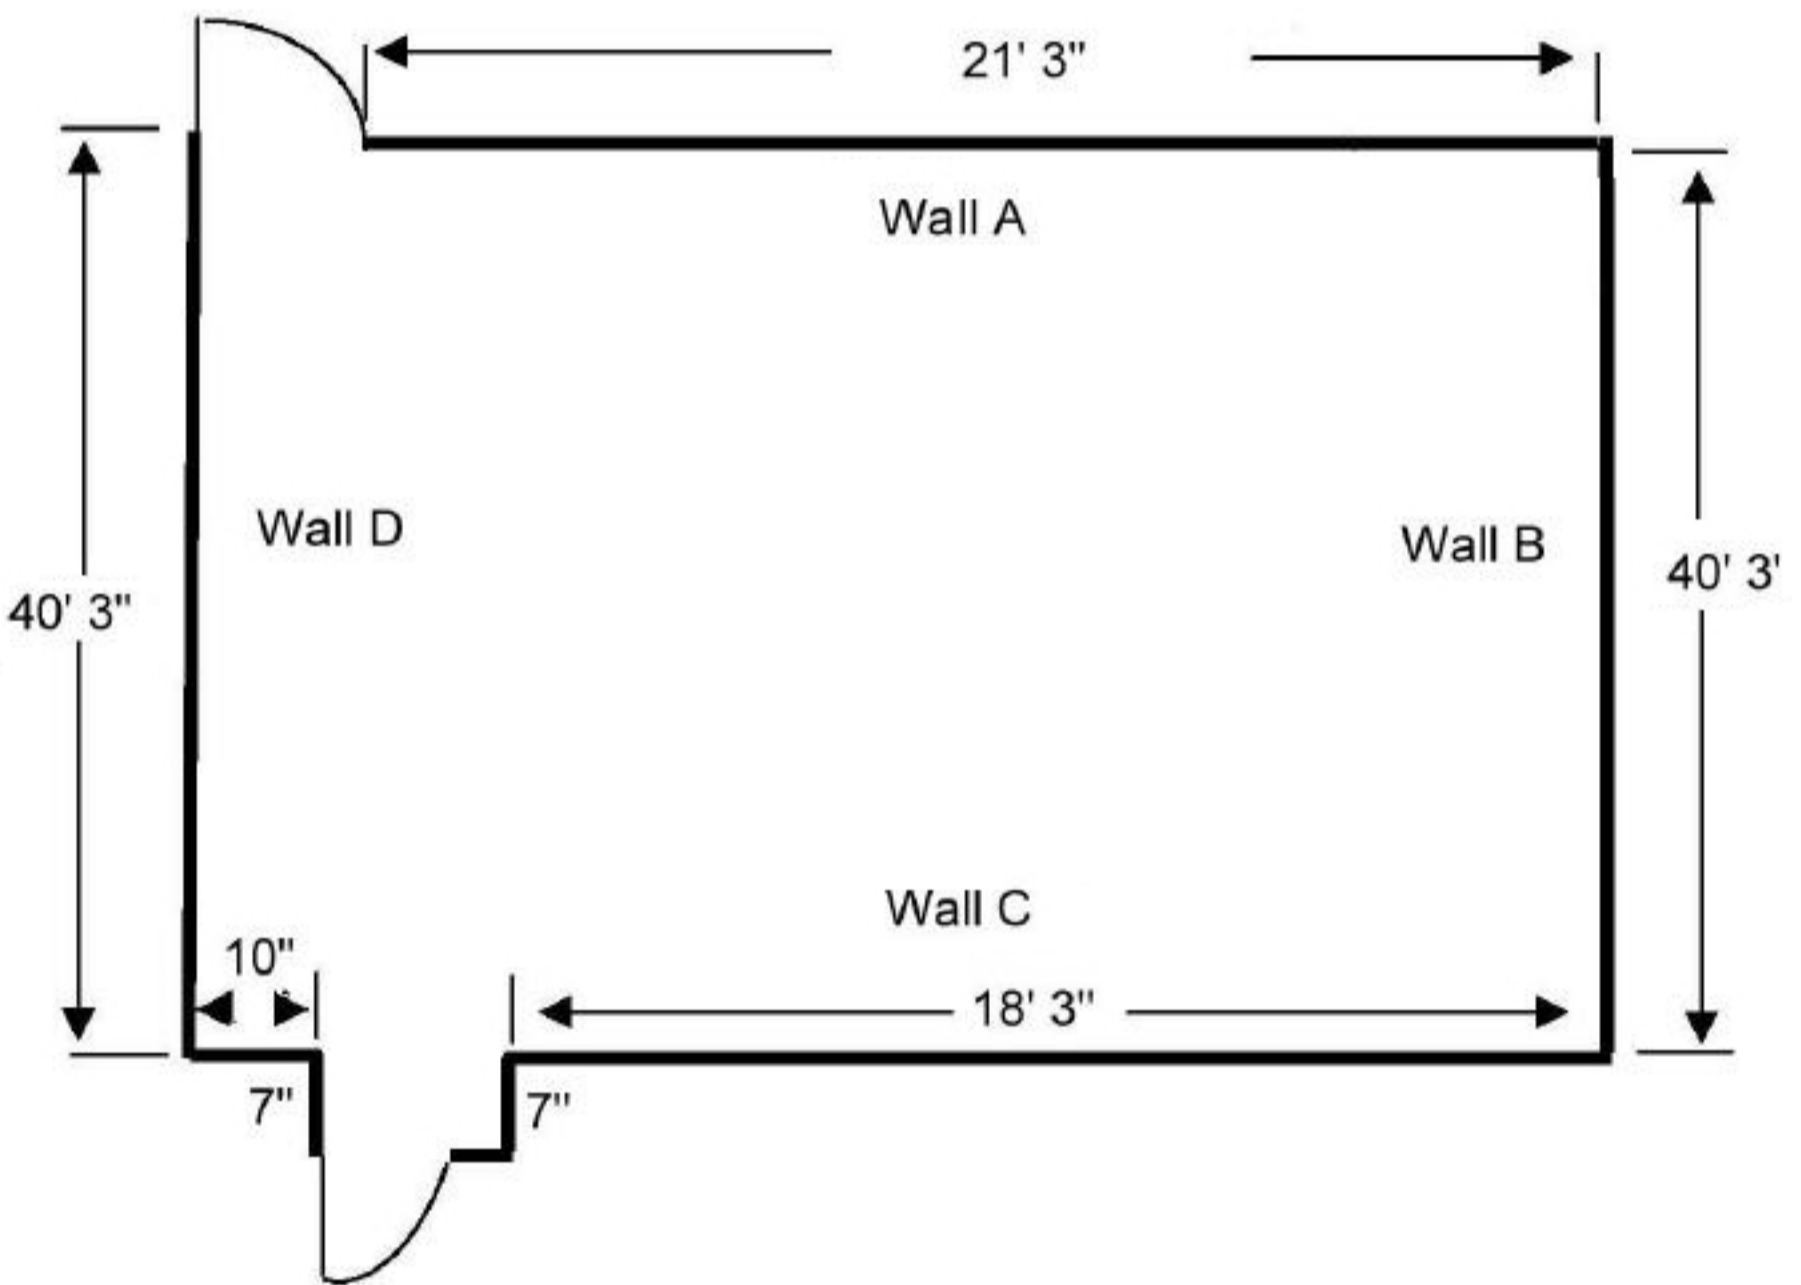

This is a guide. It is not intended to be your space. Best if you just provide similar sketches of your space. A hand sketch is fine as long as I can read the numbers. You can then just email me a picture of the sketches.

Give me true measurements. Don't make any allowances on your end. I'll show you where I make allowances at inside corners when we get to the final detailed panel layouts. Nothing will go to production until we talk through all to make sure you know the coverage you'll get.

Feel free to call for any clarification.

Thank you.

### OVERHEAD VIEW

### ELEVATION VIEW

Needed only if there are obstacles we have to allow for with a cutout in the pads - plugs, switches, fire alarm pulls, etc.

I will remit a rendering of how we'll cut the pads before anything goes to production.
